## Closeout #1288-Murry-and-Siemens-Breakers

### Murray and Siemens Breakers

#### Siemens QP Combination Arc Fault 15-Amp AFCI Combo Breaker # Q115AFCP

QP 15-Amp Combination Arc Fault Circuit Breaker

Arc fault-combo breakers detect 3 different types of arc faults Line to neutral is caused by a damaged supply cord that may damage the insulation and conductors inside Line to ground - a nail driven to hang a picture can easily penetrate the insulation of wire Series arc fault is caused by the screw terminal that connects a wire to a receptacle that may become loose as the receptacle is pushed back into the work box

Regular price: \$65.00

Full Description

**Murray MP230GF 2 Pole 30 Amp 240V GFCI Circuit Breaker**  
Murray MP230GF 2 Pole 30 Amp 240V GFCI Circuit Breaker

Murray GFCI plug in circuit breakers are intended for use in Murray load centers or meter combinations. The single pole Murray breakers may be used in 1 or 3-phase load centers and are 120V rated. To ensure the warranty on a Murray panel is not voided, the use of Murray breakers is required. The GFCI is intended for areas required by code to have ground fault protection, such as bathrooms, kitchens, and outdoor circuits. Check with your local electrical inspector to confirm. The use of a double pole AFCI allows for shared neutral applications in which two circuits will share a common neutral.

Description:

AFCI MP220AFC 20Amp 2-Pole Combination 120 Volt Plug-In Arc-Fault Circuit Interrupters Breaker

AFCI's detect arcing faults (an unintentional arcing condition in a circuit) that standard circuit breakers are unable to detect. The Combination Type AFCI detects all three possible types of arc fault: line-to-ground, line-to-neutral, and series. The device is intended to mitigate the effects of arcing faults by functioning to de-energize the circuit when an arc-fault is detected.
